

# Ring size guide

## CHECK YOUR PRINT SETTINGS!

Before printing this guide, please make sure your printer is set to 100% or "Do Not Scale".

To check if your print is correct, compare the printed ruler below to an actual ruler. Otherwise, compare a payment card with the blue border around this text or compare a coin to an outline on the right – they should all match perfectly if your print is actual size.

This guide will help you get a close approximation of your ring size, but it can never be a substitute for a professional sizing from your friendly neighbourhood jeweller.

Measure your finger near the end of the day and when your fingers are warm (and therefore slightly larger) – especially important if you're likely to wear Kerv during exercise.

Measure a few times to make sure that no mistakes are made and if in doubt select the larger size; please only submit your ring size when you're sure you've got it right!

## RING SIZER STRAP

Cut along the red lines (including the slit between the arrows). Push the end through the slit and pull the strap *tightly* (being careful not to tear it) around the larger knuckle of your favourite finger. Your size will line up with the arrows.

## STRING METHOD

Alternatively, wrap a short length of thin non-stretchable string around your knuckle and mark (or cut) at the intersection point. Don't wrap the string too tightly. Lay the string against the measure on the right to determine your ring size. If you can't print out this guide, then measure the string in mm and consult the table.

## RING COMPARISON

If you're buying a Kerv contactless payment ring for someone as a surprise gift, then this method's your best bet. Get hold of an existing ring that you know fits the lucky recipient and match up the *inside* circumference with one of these circles.
